

Hello everyone ...

My name is Moed Mohamed, I'm from Republic of Sudan , Africa ...

My first time to learn about memory techniques was in 2017 , with friend Badr Ibrahim he taught all I needed to start up with Memory techniques it was interesting , before that I was Learning about ANN and how the brain actually works so I started writing articles in my local language which is (Arabic) so that I can spread the knowledge for the seekers of it , why am deeply Interested ?

Long time ago I was reading about Laurence Kim Peek it was fascinating story to see the brain capability in action , although I know his situation is totally different. One more thing , I am A computer programmer I believe the memory techniques will be so useful for me personally remembering my codes and function or building an applications , websites ,...etc and In general am ready to help everyone So I decided to start spreading the memory techniques here in Sudan since 2017

October 2017 I built an application which is image flash slider to help my friend Badr with his Memory techniques , and I believe I can provide even More for the International Memory association and I have extreme will to join . am so glad to share my passion , and matter of fact I will not stop learning about The Memory techniques

23 august 2015 Me and My friend Mubarak started a project Titled "Learn how to learn" it wasn't about Memory it was all about developing the learning ability away from the academic one , I don't believe in the Education System but I still have the certificates ,

January 2017 I joined KSC (Knowledge sharing campaign) that was placed in India , 2015 got my BCA certificate

And for sure I will do My best to bring Memory sport to everyone specially in my country and Africa in general , all they need is awareness and I am a good speaker and debater, spreading this amazing sport will be my goal for 2019 and so ..

Sincerely ...

My Regards ...
